

# Handing in your assignments

Paul Anton Letnes

today

## Candidate number

Your candidate number is on the form 100XY (or similar), and is unique for this particular course.<sup>1</sup> As we are not allowed to know which student handed in which report, we should not be able to link this to your name or student number. You should therefore identify your mid-term project hand-in files *only* with the candidate number! Your particular digits XY can be found on studweb. Detailed instructions follow below.

## The report

You should hand in two files for the report. The first is the L<sup>A</sup>T<sub>E</sub>X source file. It should be named 100XY-report.tex. The second is the generated PDF file. It should be named 100XY-report.tex. As before, 100XY is your candidate number.

## Programming code

You should hand in your source code files. I will assume below that you are using python; if you are not, just adapt the instructions to your programming language of choice, and make a note of which language you have used in your report. The code should run without errors and generate plots similar to the ones you have in your report. You can of course split the code into several files, or keep everything in one file, that does not matter. Assuming that you have 3 files for the first assignment and 1 file for the second assignment, name your files as follows:

- 100XY-assignment-1-part-1.py
- 100XY-assignment-1-part-2.py
- 100XY-assignment-1-part-3.py
- 100XY-assignment-2.py

As before, 100XY is your candidate number. Adapt the names given in the example to your particular set of source code files.

## Wrapping it up

Before handing in the files mentioned above, you should pack them into either a .zip or .tar.gz file. Name your file either 100XY.zip or 100XY.tar.gz.

If you have no idea how to do this, ask someone (like me or Åsmund), or just use the following terminal command (for Linux/login.stud.ntnu.no or Mac OS X): `tar cvfz 100XY.tar.gz *.py *.pdf *.tex`.

## Handing in the files

Finally, when you are done, e-mail your .zip or .tar.gz file to Åsmund Ervik, our amazing student assistant, at `asmunder@tt.stud.ntnu.no`. Put [tfy4240] in the email subject. He will send all the files to me containing only your candidate number, so that your anonymity is ensured.

---

<sup>1</sup>Your student number follows you throughout your entire studies, and is on a different format, probably 6 digits starting with a 6 or a 7.
