

Summary reference group meeting 17.10

Practical

- People are generally happy with the course
- Currently there are 2 exercises lacking solutions. Solutions to exercises will come eventually, however they may come a little late
- There may be some errors in exercise 5
- Teaching assistants has been busy with things, but will finish correcting obligatory assignment soon

Curriculum

- There are quite a lot of topics, and not everything will be taken in detail
 - The book and maybe even previous lecture notes is recommended for details
- 2 big chapters left, special relativity and harmonic oscillations
- May also go through canonical transformations and relate this to some quantum mechanics

Exam relevant

- Exams made by previous lecturers seem typically quite hard. His exams are more "reasonable". Exam from 2007 may serve as a good example. It is about 97% of the same curriculum
- Assignments are important for the course and exam. They are highly recommended and relevant to do.
- It is also recommended to show up on the final lecture
- If he has time he will try and make a trial exam as the final assignment. (This will probably not be the case)

Cake

- There may possibly come a day where he will bring cake!
